REACH Regulation (EC) 1907/2006
Your request to PRO-plast Kunststoff GmbH, D-64331 Weiterstadt
-Status Report-

Dear Ladies and Gentlemen,

as an always responsible acting company, PRO-plast Kunststoff GmbH has dealt with the requirements of the REACH Regulation (EC) 1907/2006 since the beginning. In addition, we are externally consulted by asseso AG, the BAuA (Federal Institute for Occupational Safety and Health) or as well as by consultants of the industry (TecPart). The knowledge of the current legal situation is thus ensured at all times.

For all polymers and additives marketed by us, we have submitted a pre-registration of the according substances and monomers on the 12th of November 2008. Our universal unique identifier (UUID) is IUC5-45203004-c196-4dba-be63-927264ea9369

As a result of communicating with suppliers you may say that the PRO-plast Kunststoff GmbH should not be subject to registration requirements, as these are to be met by the manufacturers or importers. The PRO-plast Kunststoff GmbH operates within the supply chain as a "downstream user" or "dealer". Therefore from today's perspective it is rather unlikely that the current products offered by PRO-plast Kunststoff GmbH will no longer be available due to REACH requirements.

With regard to the communication under Article 31, 33 REACH Regulation (EC), we can see that the until today available supplier information does not demand a notification of substances from Annex XIV REACH Regulation (EC), respectively, the candidate list. The candidate list for Annex XIV REACH Regulation (EC) is expanded dynamically, so that only already included substances can be referred to. The current version of the candidate list is available on the ECHA website at
http://echa.europa.eu/chem_data/candidate_list_table_en.asp

PRO-plast Kunststoff GmbH expanded its conditions of purchase in matters of their suppliers, so that in future substances, which are listed in candidate list, are forwarded by the suppliers of PRO-plast Kunststoff GmbH in a timely manner. This ensures that PRO-plast Kunststoff GmbH's customers are immediately informed about the necessary information on substances of very high concern.
